

LAB 14 REPORT

Name: Muhammad Sohaib

Reg No: 2026(S)CYS52

Lab Title: Lambda Function & File Handling

Theory: Lambda Function is an anonymous function in Python used to create small, single-line functions without using the def keyword.

File Handling is used to read, write, and manage files in Python using functions like open(), read(), and write().

These concepts help in performing quick operations and storing data permanently.

TASK 1

```
def welcome():  
    global x  
    x = 10  
    print(x)  
welcome()
```

```
def a():  
    x = 25  
    print(x)  
    print(globals()["x"])  
a()
```

Output:

```
10  
25  
10  
  
Process finished with exit code 0
```

TASK 2

```
a=lambda x:x*x
```

```

print(a(25))
a=lambda x,y,z:x+y+z
print(a(25,52,60))
a=[1,20,25,50,52]
a=list(map(lambda x:x*2,a))
print(a)

```

Output:

```

625
137
[2, 40, 50, 100, 104]

Process finished with exit code 0

```

Task 3

```

a=open(".txt","a")
s=a.write("what about me?")
print(s)
a.close()

```

Output:

```

14

Process finished with exit code 0

```

TASK 4

```

a=open(".txt")
s=a.read()
print(s)
a.close

```

Output:

```

what about me?what about me?what about me?what about me?what about me?

Process finished with exit code 0

```
